

is a clean energy company founded by Brian Weninger and incorporated in 2002. The company markets and sells wind energy to businesses & residential customers. The company also sells solar photovoltaic systems and does research for power systems and to offer clean fuels in the future.

The company's mission is to provide clean & renewable energy in the new millennium

SKY ENERGY, INC.

For more information or to purchase clean and renewable energy please contact the company.

Residential Wind Energy

>Residential

WIND-E® RENEWABLE ENERGY

WHY BUY SKY?

>The average home uses 10,000 kWh of electricity per year. Power plants emit over 11,200 pounds of air pollution per year to generate that amount of electricity!

>Air pollution from power generation and automobiles causes haze, reduces visibility, acid rain, ozone damage, climate change, and affects water quality according to the EPA!

>Renewable energy is currently only 7% of US energy production and less than 19% world wide!

>Combustion engines in automobiles and aircraft require lots of oxygen to run effectively along with fuel.

The reasons are clear!

SKY ENERGY'S WIND-E® Energy is

100% Clean

100% Renewable

... is the energy generated by large modern wind turbines when the wind blows across the sky and spins the blades of the turbines that in turn generate electricity without air pollution that can be used to power homes, electronic devices, and even electric vehicles. The electricity is measured and sold in kilowatt-hours (kWh) or megawatt-hours (MWh). *Each kilowatt-hour of wind energy offsets or reduces over 1.37 lbs of air pollution emitted into the atmosphere based on the average for power generation from fossil fuels and nuclear energy!* And wind energy doesn't burn oxygen, which is essential for life!

Wind turbines connected to utility transmission lines transfer the electricity to customers in their regions. The company uses a credit based system for customers that don't have them in their area, but would like to purchase the benefits of wind energy and support the development of renewable energy that reduces the use and need for depleting and polluting sources of energy.

SKY ENERGY® currently offers three levels of wind energy to residential customers to reduce global air pollution. For more information please contact the company or if you're ready...
